Measure how efficiently a company uses its assets to generate sales, indicating how well management converts investments into revenue.

Asset Turnover Efficiency

All amounts are displayed in USD

At 1.47, 2025 had the highest Total Asset Turnover and was 133.90% higher than 2023, which had the lowest Total Asset Turnover at 0.63.

2025 had the highest Total Asset Turnover at 1.47, followed by 2024 at 1.14 and 2023 at 0.63.

2023 had 0.63 Total Asset Turnover, 2024 had 1.14, and 2025 had 1.47.

At 19.57, 2025 had the highest PPE Turnover and was 206.61% higher than 2023, which had the lowest PPE Turnover at 6.38.

2025 had the highest PPE Turnover at 19.57, followed by 2024 at 12.06 and 2023 at 6.38.

2023 had 6.38 PPE Turnover, 2024 had 12.06, and 2025 had 19.57.

Working Capital Efficiency

At 4.25, 2025 had the highest Inventory Turnover and was 41.99% higher than 2023, which had the lowest Inventory Turnover at 2.99.

2025 had the highest Inventory Turnover at 4.25, followed by 2024 at 3.18 and 2023 at 2.99.

2023 had 2.99 Inventory Turnover, 2024 had 3.18, and 2025 had 4.25.

At 121.96, 2023 had the highest Inventory Days (DIO) and was Infinity higher than 2022, which had the lowest Inventory Days (DIO) at 0.

2023 had the highest Inventory Days (DIO) at 121.96, followed by 2024, 2025, and 2022.

Across all 4 Year, Inventory Days (DIO) ranged from 0 to 121.96.

At 8.81, 2024 had the highest Accounts Receivable (AR) Turnover and was 38.48% higher than 2023, which had the lowest Accounts Receivable (AR) Turnover at 6.36.

2024 had the highest Accounts Receivable (AR) Turnover at 8.81, followed by 2025 at 7.89 and 2023 at 6.36.

2023 had 6.36 Accounts Receivable (AR) Turnover, 2024 had 8.81, and 2025 had 7.89.

At 7.14, 2024 had the highest Accounts Payable (AP) Turnover and was 11.43% higher than 2025, which had the lowest Accounts Payable (AP) Turnover at 6.41.

2024 had the highest Accounts Payable (AP) Turnover at 7.14, followed by 2023 at 6.50 and 2025 at 6.41.

2023 had 6.50 Accounts Payable (AP) Turnover, 2024 had 7.14, and 2025 had 6.41.

Cash Conversion Efficiency

At 123.16, 2023 had the highest Cash Conversion Cycle and was Infinity higher than 2022, which had the lowest Cash Conversion Cycle at 0.

2023 had the highest Cash Conversion Cycle at 123.16, followed by 2024, 2025, and 2022.

Across all 4 Year, Cash Conversion Cycle ranged from 0 to 123.16.

NVIDIA Corporation

AI Insights

Liquidity Position Review

The Current Ratio declined from 15.25 in 2022 to 11.14 in 2025, indicating a gradual tightening of liquidity, though still well above the typical SME benchmark of 1.5–2.5 in the semiconductor/AI sector. This suggests the company holds significantly more current assets relative to current liabilities, implying low short-term funding pressure but potential inefficiency in asset deployment. The Quick Ratio closely mirrors the Current Ratio given low prepaid expenses and moderate inventory levels, showing that liquidity is not overly dependent on slow-moving stock. The Cash Ratio fluctuated, peaking at 2.43 in 2024 before dropping sharply to 1.19 in 2025, reflecting reduced immediate cash availability relative to liabilities.

The spread between the Current Ratio and Cash Ratio indicates reliance on receivables and inventories for liquidity. Inventory Days (DIO) rose from ~100 days in 2022 to over 112 days in 2025, suggesting slower inventory turnover, which could tie up working capital. Receivables turnover declined slightly in recent years, with Days Sales Outstanding (DSO) rising to ~64 days in 2025, indicating slower collections and potential strain on cash conversion.

Recommendations: 1) Implement stricter credit terms and enhance collections to reduce DSO. 2) Optimize inventory management to lower DIO towards industry norms (~60–90 days). 3) Maintain a minimum cash ratio above 1.5 to ensure strong liquidity buffers. 4) Deploy excess current assets into productive investments or debt reduction. Risks to monitor include overreliance on receivables for liquidity, potential write-downs in inventory, and volatility in cash balances.

About

This Financial Ratios Dashboard provides a clear and structured view of a company's financial health by analyzing data directly from financial statements. It highlights key areas such as profitability, efficiency, liquidity, and solvency, turning complex figures into easy-to-understand visuals and indicators.

The dashboard is designed to support informed decision-making, continuous monitoring, and early detection of risks or opportunities.
